

# AKTENA DISPENSERS

**Dispensing. The property of huge importance, that is either part of the product or supplied as an additional dispensing system. Controlling Quantity and Creating Advertising Surfaces at the same time.**

The dispensing features of our products but also dispensing systems and machines, have been part of our range from the late '80s. On nationwide basis, our company was the initial company which applied dispensing systems for in-store packaging products on mass scale with large retail clients back then.

We have since installed and designed thousands of dispensing units for the major supermarket and retail chains, while our products feature increasingly dispensing properties as they develop.

The purpose of a dispenser is a combination of better organizing the supply of the bag to the client, hygiene, image, space-saving, quantity-control, and possibly, if required, charging control at sales point (in case the bags would be charged).

Apart from dispensing system, there are self dispensing products, which assist, through their special packaging, the one-by-one pulling of the individual pieces, thus preventing chaotic dispersing of bags at sales points, and also encouraging cost control by preventing usage with no reason.

We also design, supply and apply in-store dispensing systems as tailor made solutions and projects for the retail chains.

## DISPENSER CONTEMPO

For the last 30 years, roll-bags dispensers, have remained virtually unchanged.

Now, we invest in the production of the **PRODUCTION-ITEM1-AKTENA-CONTEMPO-D**

which

- Is specially designed for compostable bags after hundreds of attempts so as bags are dispensed without being hurt
- Does not rust and lasts for years without any damages
- Can easily be cleaned with water and dipped in water with no implication on the material
- Can have engraved logo of client
- Can be used as advertising surface
- Option of Eink
- Option of Made from Plastic Bags Collected from the sea
- Antibacterial Option
